

Product Description

Polycarbonate nozzle collar for high temperature applications

Durable aluminum construction

0.88 inch inside diameter nozzle

Threaded plenum cap type installation

Includes 1.25 inch diameter hose port

This disc type air valve is designed for high flow volumes at low duct pressure. The air valve includes a black plastic nozzle collar that provides thermal insulation for heated air. Typical applications are for crew areas in rotorcraft. The threaded plenum cap is used to install the air valve. The beaded hose port on the plenum cap interfaces to standard 1.25 inch ID air supply hoses.
